

Piece F: Diary

This morning, 4th April in the year of our Queen 1866, I proceeded to the African grasslands (Kenya) in search for new examples of fauna and flora. May I say, I was astonished to meet the chameleons, which have only been seen once before in 1632!

As the sun rose, I managed to keep calm whilst standing amongst the most deadliest species of plant on this grassland. Interestingly, the plant was named the Octavian's Gun Plant because, when threatened, it shoots out poison darts. Following this, I was alarmed to witness the venomous plant instantly kill a defenceless creature ~~from~~ just one touch. The most shocking aspect from this tragic death, was the permanent pain of the ~~the~~ animal.

As the day carried on, I proudly stood next to ~~the~~ rare chameleons (only seen once before in 1632) which were all dressed alike and beautiful. I cannot say how extraordinary it was, to watch them all change their bright colours on their scaled skin; wine-red, astral-blue, buttery-yellow, emerald-green and so many more colours which I didn't know existed. My colleague, who inspired ~~to~~ come on to join him on this journey and risk my life to find this animal
